

OMEGA 2.0 - FULL SYSTEM WIRING DIAGRAM

UI LAYER
(OneTouch Command Surface)

OMEGACORE
Central Orchestrator / Think Loop

ROUTING SPINE

IntelligentRouter	intent detection
ActivationRouter	model selection
OmegaRouter	hemisphere routing

CORTEX HEMISPHERE

Environment: venv_llm
Role: Reasoning, planning, language, routing, memory

MODELS:

omega_chat	(general dialogue)
omega_reason	(deep reasoning)
phi4_mini	(fallback / safety)
deepseek_r1_distill	(structured reasoning)
qwen25_coder	(coding / build logic)
gemma2_2b	(lightweight reasoning)

SUBSYSTEMS:

- MemoryEngine (short + long term)
- ReflectionLoop (posttask analysis)
- PlanningLoop (multistep task planning)
- SkillRouter (maps tasks skills)
- WorkOrder Generator

OUTPUT:

Structured tasks Silicon Hemisphere

SILICON HEMISPHERE

Environment: conda ryzen1.6.1
Role: Execution, hardware, builds, compilation, toolchains

HARDWARE BACKENDS:

- CPU
- GPU

NPU
Hybrid

SUBSYSTEMS:

BuildFactory (APK / EXE / WEB)
Toolchains (Android, Windows, Web)
Sandboxed Execution
Watchdogs (vitals, safety, runaway process control)

BUILD DOMAINS:

APK: manifest.py, toolchain.py, lifecycle.py, engine.py
controller.py
EXE: manifest.py, toolchain.py, lifecycle.py, engine.py
controller.py
WEB: manifest.py, toolchain.py, lifecycle.py, engine.py
controller.py

OUTPUT:

Artifacts OmegaCore UI

MEMORY HEMISPHERE

omega_memory.json
Longterm identity + skill patterns
Build history + failure streaks
Planning context + task traces

IMMUNE SYSTEM

Failureblocking protocol (3 strikes block skill)
Safety watchdogs
Recovery routines
Selfdiagnostics

BUILD OUTPUT LAYER

APK factory/apk/output
EXE factory/exe/output
WEB factory/web/output
Logs factory/logs
